CAD (computer-aided design) and drafting software is used to create three-dimensional (3D) drawings, which represent a physical layout of an object, workpiece or other construction. CAD is commonly used for the design of buildings, machinery, electronic devices, and consumer products. Drafting is the process of converting this data into visual representations on paper or other media. In AutoCAD, the word "drafted" refers to the automated process of producing a paper or other drawing, and may refer to the printed result or to the process of producing it. Drafting in AutoCAD is performed using a specialized display called a drawing canvas. This is a monitor or other display device on which the design (drawing) is displayed. Traditionally, drafting work is carried out on paper, but in the late 1980s and early 1990s, 3D Drafting with a computer mouse began to gain popularity. A wireless mouse now has an internal receiver that can connect to a computer wirelessly, so that a user can move the mouse about the drafting area. Contents AutoCAD software development is sponsored by Autodesk. This requires that users adhere to the Autodesk Authorized Training Program. The authoring, engineering and design fields also use other Autodesk products, including the AutoCAD software, other Autodesk applications, and other Autodesk products. AutoCAD is the only application from Autodesk that can be purchased by individuals to use for personal or non-commercial use. AutoCAD is not sold to the public, but only to individuals who have registered with Autodesk. AutoCAD has a very large user base, with estimates of over 20 million users. The application is used by engineers, architects, construction workers, interior designers, graphic designers, musicians, painters, filmmakers, and other people in the creative industries. Since the early 1990s, the application has been used in professional contexts by engineers, architects, and interior designers, in addition to the masses of users in the home and office. In 1998, it was estimated that there were 200 million users of AutoCAD worldwide. In 2005, the number was over 400 million users. As of 2008, the number is over 500 million users. History AutoCAD was originally developed by a small company called TransCAD in 1981. In 1982, it was purchased by Delphi. TransCAD was renamed TransVis
