Cracking Adobe Photoshop is not as straightforward as installing it. It requires a few steps to bypass the security measures that are in place. First, you must obtain a cracked version of the software from a trusted source. Once you have downloaded the cracked version, you must disable all security measures, such as antivirus and firewall protection. After this, you must open the crack file and follow the instructions on how to patch the software. Once the patching process is complete, the software is cracked and ready to use.

The interpolation and smoothing of the previous releases have been improved. Even the curves are more responsive. One of the new buttons is the ability to move the crop tool on and off the image. This gives a great flexibility in aligning objects in the composition. While I really don't like the fact that the app is a bit sluggish, I still like it overall. I enjoy working with the "Artistic" brushes a lot. I guess that's just my individual preference, but I like to think that the "Artistic" brushes lend a distinctive look to my work. The new version of PS is also compatible with the newly rolled out AI features (i.e. Mimic Effect). The entire version is still something that I love to do. Obviously, I'm not a painter. That being said, the use of AI brushes on a top quality image for a logo or other design still blows my mind. This is definitely something that I'd expect to see from a higher end piece of work. I love the fact that Photoshop has evolved enough to blend so well into other design platforms like Sketch, Figma, or InVision. Finally a good and positive review of LR5. 2! I did leave one negative point out and I don't think that's true. I have no idea why I or anyone else voted against the smart previews. I think a lot of us are still afraid of the file format changes and the Coreui so it's going to be a long time before it's fully embraced by most. There's no way you can have a rendering engine that doesn't work especially on a file that changes every 2 seconds.

I love my LR but will be very sad when it's part of CC.

Ever since the dng feature landed I didn't touch LR anymore! I'm happy enough with the three tab view. I've used the previews for my bad photos but not for my good ones though. The raw development speed of LR5 is amazing! I rarely have any speed issues. However the 'build' processing speed is terrible. I've had things hanging on me for hours during export. You can export on the go but when you need to do more processing you're still with or without the half processed file whereas iris/lightroom could manage in a second.
