I feel like every time Microsoft releases a new version of its productivity suite of software, the update is ridden by bug fixes, security issues, and feature additions. This month is no different. Microsoft has released Office 2019 that brings a few new features to the suite and fixes some bugs from earlier releases. If you need something new, check out our review of Office 365 for Windows, which focuses more on features. But if your focus is on just working, check out what is new and improved in Microsoft Office 2019. Microsoft Office 2019 starts things off with some new features that improve communication in Office. A new Relationship Quick View has the ability to keep an overview of spreadsheets and presentations in Office 2019. This is in place of a prior feature named Charts, but there is still a way to bring up itical views of your presentations. Supporting this new feature is a new OneNote Viewer that shows you how your drawings will look. This feature is still available in Office 2013 but not on previous versions of Office. Microsoft has also added some new templates to Office 2019, including a company brand of text layouts. This feature lets you edit and save as a template saving you the time to make these changes. If you are looking for something simple and quick like a print driver, Microsoft is also updating those for you as well.

Adobe's Photoshop CS6 now provides improved low-light performance in Raw images, thanks to a new "smart" noise reduction technique that's able to better discern highlights and shadows depending on the scene and lighting conditions. A new GPU compression engine increases image performance while protecting content, and the new Content-Aware Crop tool makes it possible to easily crop just the image area, all within Photoshop. Photoshop Creative Cloud users can now send and receive Photoshop files between students (and others) using the in-app Please Send Me feature, which works on Google Translate . The feature is currently limited to use on mobile devices, but Adobe promised it will have multiple platforms supported soon. Photoshop also now supports two-way sync with Lightroom CC via Adobe CreativeSync. This option allows users to restore, adjust, and share files directly between the two products as well as between different Photoshop file formats. Adobe has released Photoshop CC 2018 for Create and Share, which makes it possible to share Web content, documents, and social snapshots directly to a client's profile within Adobe Creative Cloud. The tool also provides a new download history that can be used to retrieve previously downloaded versions of files. An upcoming release will let users publish to the Adobe Creative Cloud account. Lightroom CC 2018 also includes several new features, including a new automatic-review system that tests for legal attribution of all images, a full-fledged crop tool that lets users more easily make precise adjustments to images and graphics, and a feature that makes it easier to get accurate color in full-resolution files. Adobe also added support for WebP and improved Print Order.
